

## Evolution of Kernel Module Signing Errata

- The correct version of the slides can be found at <http://cs.dartmouth.edu/~bx/code-signing/talks/shmoocon-2014-2.pdf>
- On the “More than one way to skin an ELF” slide, I added a note that Linux kernel modules do not have program headers and are loaded from their section header table
- On my “Critiques, etc”, I changed the first bullet point from “Why are only section headers signed?” to “Why aren't all the metadata signed?”
